

Scan and View Results using the JFrog Eclipse IDE Plugin

JFrog Xray automatically performs a scan when the plugin first loaded on startup.

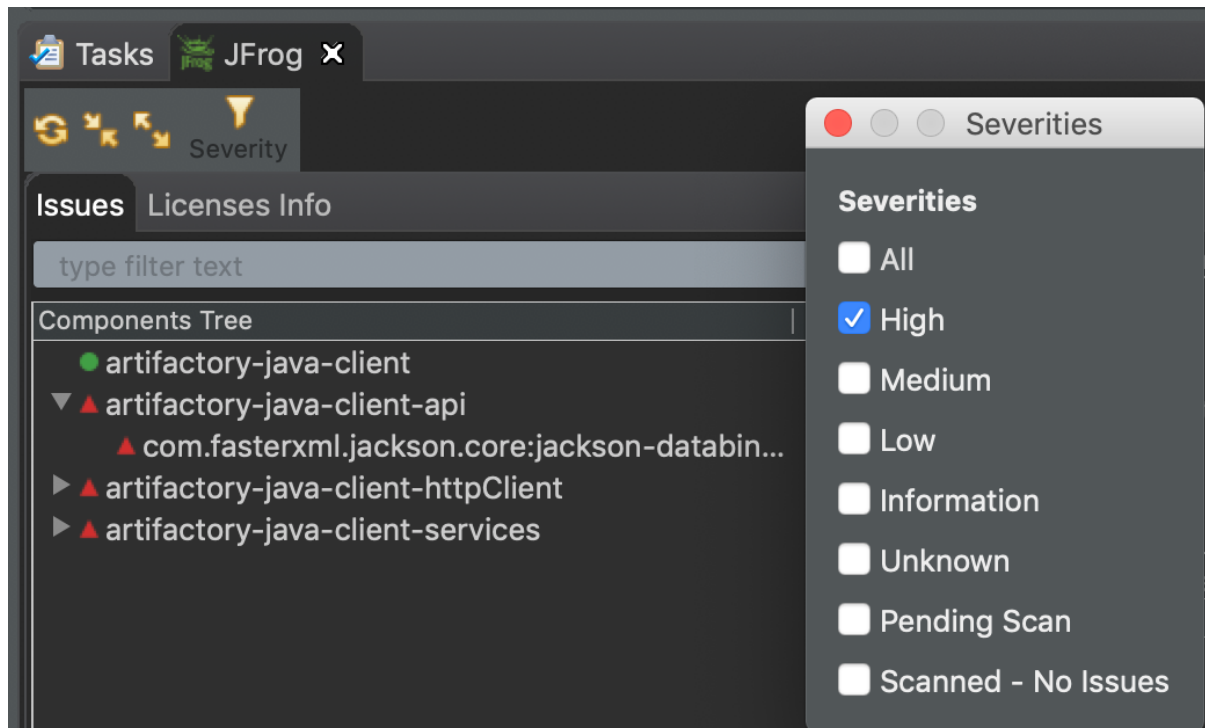

To manually invoke a scan:

1. Click Refresh in the JFrog plugin.
2. View the scanned results in the plugin.

Filtering Xray Scanned Results using the JFrog Eclipse IDE Plugin

The JFrog plugin provides the following filter to narrow down the scanned results to view exactly what you need:

- **Severity:** Displays issues according to specific severities.

- **License:** Displays components according to specific licenses.
